MERN Stack Web Developer with hands-on experience building full-stack applications featuring RESTful APIs, real-time functionality, and secure authentication – seeking a Web Development Internship where I can contribute to real-world products while expanding my full-stack development skills.

EDUCATION

Vellore Institute Of Technology

Chennai

Bachelor of Technology in Electrical and Computer Science; CGPA: 9.13

Jul. 2024 – May 2028

- **Relevant Coursework:** Data Structures and Algorithms, Operating Systems, Database Management Systems, Computer Networks, Discrete Mathematics

PROJECTS

SettleUp | *React, Node.js, Express, MongoDB, Socket.IO*

July 2026

- Built a full-stack group expense-splitting web app with itemized bill splits and a debt-simplification algorithm that reduces group settlements to the minimum number of transactions
- Implemented real-time balance and settlement sync across all connected clients using Socket.IO, eliminating the need for manual refresh
- Designed and enforced a role-based access control system for group ownership — including member removal, ownership transfer, and cascading account/group deletion — with server-side authorization checks on every state-changing endpoint
- Secured the API with JWT authentication, bcrypt password hashing, and input validation, and covered core financial logic (debt simplification, expense splitting) with a 30+ test Jest suite

[Live Demo](#) | [GitHub Link](#)

DevShelf | *React, Node.js, Express, MongoDB, MUI, Axios*

June 2026 – July 2026

- Built a full-stack developer resource directory (MERN stack) where users can browse, search, filter by category, and sort community-submitted dev tools/APIs/UI libraries
- Designed a RESTful API (Express/Mongoose) with CRUD endpoints for resources, including atomic like/unlike counters using MongoDB's \$ inc operator
- Added backend input sanitization middleware to strip MongoDB operator keys (\$) from request bodies, preventing NoSQL injection via query-operator payloads
- Built a Material UI-based frontend with client-side URL validation, a submission dialog for adding new resources, and persistent like state via localStorage

[Live Demo](#) | [GitHub Link](#)

Who Is That Pokémon? | *JavaScript, HTML, CSS, PokeAPI*

June 2026 – July 2026

- Built a browser-based guessing game (inspired by the anime segment) covering all 151 original Pokémon, using live sprite images pulled from the public PokeAPI
- Implemented a silhouette-reveal mechanic with real-time input matching — the game checks the guess on every keystroke rather than requiring a submit action
- Designed a hint system that procedurally reveals a random subset of letters in the Pokémon's name, and a dynamic UI that recolors the game background gradient based on the Pokémon's elemental type(s)

TECHNICAL SKILLS

Languages: Java, Python, JavaScript, HTML/CSS

Frameworks: React, Node.js, Express, Material-UI, Bootstrap, Tailwind CSS

Developer Tools: Git, GitHub, VS Code

Databases: MongoDB, MySQL

Libraries: Mongoose, Socket.IO, bcrypt.js, Axios

Concepts: RESTful API Design, CRUD Operations, Authentication & Authorization, JWT Authentication, Jest, Responsive Web Design

ACHIEVEMENTS

Participated in **Reforge**, a web development hackathon organized by the OSPC (Open Source Programming Club), where teams were given a base codebase to extend and improve with new features

POSITIONS OF RESPONSIBILITY

Sports Club Member – Managed and organized an inter-college badminton tournament
