MOHAMED IDRIS UMAEER

Electrical & Computer Science Student | Software Developer

Chennai, India | 7708643015 | miumaeer@gmail.com | linkedin.com/in/mohamed-idris-umaeer-5329a7332
github.com/Md-IdrisUmaeer | leetcode.com/u/Umaeer | md-idrisumaeer.github.io/portfolio

SUMMARY

Electrical and Computer Science undergraduate (CGPA 9.13) focused on backend and full-stack development, with strong DSA fundamentals (230+ LeetCode problems solved). Builds and deploys production-style applications with RESTful APIs, real-time sync over WebSockets, role-based authorization and automated tests. Seeking a Software Developer Intern role to apply strong CS fundamentals and clean, well-tested code to real-world products.

EDUCATION

Vellore Institute of Technology, Chennai Jul 2024 – May 2028

Bachelor of Technology in Electrical and Computer Science — **CGPA: 9.13**

Relevant Coursework: Data Structures and Algorithms, Operating Systems, Database Management Systems, Computer Networks, Discrete Mathematics

TECHNICAL SKILLS

Core CS: Data Structures & Algorithms, Problem Solving, Object-Oriented Programming, Operating Systems, DBMS, Computer Networks

Languages: Java, Python, JavaScript, C, HTML/CSS, SQL

Frameworks & Libraries: React, Node.js, Express, Socket.IO, Mongoose, Axios, bcrypt.js, Material-UI, Bootstrap, Tailwind CSS

Databases: MongoDB, MySQL

Tools & Concepts: Git, GitHub, VS Code, RESTful API Design, JWT Authentication, Authentication & Authorization, CRUD Operations, Jest, Responsive Web Design

PROJECTS

SettleUp | React, Node.js, Express, MongoDB, Socket.IO, Jest Jul 2026
github.com/Md-IdrisUmaeer/Settle-Up | settle-up-wheat.vercel.app

- Built a full-stack group expense-splitting app with four split modes (equal, percentage, exact, shares) and a greedy O(n log n) debt-simplification algorithm that settles n members in at most n−1 payments
- Synced balances and settlements live across all clients using Socket.IO rooms, with JWT-verified socket handshakes and a group-membership check before any client joins a room
- Enforced role-based authorization on every state-changing endpoint: owner-only member removal and ownership transfer, payer/receiver-only settlement confirmation, and leave/remove/delete blocked until balances are settled
- Secured auth with JWT and bcrypt; wrote 30+ Jest and Supertest tests on an in-memory MongoDB covering split math, balance calculation and debt simplification; deployed on Vercel, Render and MongoDB Atlas

Backend Foundations (SettleUp Prototypes) | Node.js, Express, JWT, Socket.IO, Jest 2026
github.com/Md-IdrisUmaeer/backend-practice

- Prototyped SettleUp's core backend from scratch as isolated modules, including a debt simplifier that stores money as integer paise to eliminate floating-point drift, covered by Jest tests
- Built a JWT-authenticated real-time server where Express routes validate and persist an expense before broadcasting it to a Socket.IO group room, plus demos of tampered-payload, wrong-secret and expired-token failures

DevShelf | React, Node.js, Express, MongoDB, MUI, Axios Jun 2026 – Jul 2026
github.com/Md-IdrisUmaeer/Dev-Shelf | dev-shelf-lime.vercel.app

- Built a MERN developer-resource directory with search, category filters and sorting by newest, oldest or most-liked, plus a validated submission form for new tools, APIs and UI libraries
- Designed a REST API (Express, Mongoose) for creating, listing and liking resources, using MongoDB's atomic $inc operator for like/unlike counters
- Wrote middleware that recursively strips $-prefixed operator keys from request bodies, blocking NoSQL injection via query-operator payloads

Who Is That Pokémon? | JavaScript, HTML, CSS, PokeAPI Jun 2026 – Jul 2026
github.com/Md-IdrisUmaeer/whos-that-pokemon | md-idrisumaeer.github.io/whos-that-pokemon

- Built a dependency-free browser game covering all 151 original Pokémon, with sprites loaded from PokeAPI and guesses matched on every keystroke instead of a submit action
- Added a randomized hint system that reveals about a third of the letters, and a background gradient that recolors to match each Pokémon's elemental type(s)

ACHIEVEMENTS

- 230+ problems solved on LeetCode, covering arrays, strings, trees, graphs and dynamic programming
- Participated in Reforge, a web development hackathon organized by the OSPC (Open Source Programming Club), extending a base codebase with new features under time constraints
