MOHAMED IDRIS UMAEER

Electrical & Computer Science Student | Software Developer

Chennai, India | 7708643015 | miumaeer@gmail.com | linkedin.com/in/mohamed-idris-umaeer-5329a7332 | github.com/Md-IdrisUmaeer | leetcode.com/u/Umaeer | md-idrisumaeer.github.io/portfolio

SUMMARY

Electrical and Computer Science undergraduate (CGPA 9.13) focused on computer science and software development, with strong fundamentals in data structures, algorithms, and analytical problem-solving (230+ LeetCode problems solved), paired with hands-on full-stack development experience building production-style applications with RESTful APIs, real-time systems, and secure authentication. Seeking a Developer Intern role to apply strong CS fundamentals and clean, efficient coding to real-world software R&D projects.

EDUCATION

Vellore Institute of Technology, Chennai **Jul 2024 – May 2028**

Bachelor of Technology in Electrical and Computer Science — CGPA: 9.13

Relevant Coursework: Data Structures and Algorithms, Operating Systems, Database Management Systems, Computer Networks, Discrete Mathematics

TECHNICAL SKILLS

Core CS: Data Structures & Algorithms, Problem Solving, Object-Oriented Programming, Operating Systems, DBMS, Computer Networks

Languages: Java, Python, JavaScript, C, HTML/CSS, SQL

Frameworks & Libraries: React, Node.js, Express, Socket.IO, Mongoose, Axios, bcrypt.js, Material-UI, Bootstrap, Tailwind CSS

Databases: MongoDB, MySQL

Tools & Concepts: Git, GitHub, VS Code, RESTful API Design, JWT Authentication, Authentication & Authorization, CRUD Operations, Jest, Responsive Web Design

PROJECTS

SettleUp | React, Node.js, Express, MongoDB, Socket.IO **Jul 2026**

github.com/Md-IdrisUmaeer/Settle-Up | settle-up-wheat.vercel.app

- Built a full-stack group expense-splitting application with itemized bill splits and a debt-simplification algorithm that reduces group settlements to the minimum number of transactions
- Implemented real-time balance and settlement sync across all connected clients using Socket.IO, eliminating the need for manual refresh
- Designed and enforced a role-based access control system for group ownership — including member removal, ownership transfer, and cascading deletion — with server-side authorization checks on every state-changing endpoint
- Secured the API with JWT authentication, bcrypt password hashing, and input validation; covered core financial logic (debt simplification, expense splitting) with a 30+ test Jest suite

DevShelf | React, Node.js, Express, MongoDB, MUI, Axios **Jun 2026 – Jul 2026**

github.com/Md-IdrisUmaeer/Dev-Shelf | dev-shelf-lime.vercel.app

- Built a full-stack developer resource directory (MERN stack) supporting browsing, search, category filtering, and sorting of community-submitted dev tools, APIs, and UI libraries
- Designed a RESTful API (Express/Mongoose) with CRUD endpoints, including atomic like/unlike counters using MongoDB's $inc operator
- Implemented backend input-sanitization middleware to strip MongoDB operator keys ($) from request bodies, preventing NoSQL injection via query-operator payloads
- Built a Material UI frontend with client-side URL validation, a submission dialog for adding new resources, and persistent like state via localStorage

Who Is That Pokémon? | JavaScript, HTML, CSS, PokeAPI **Jun 2026 – Jul 2026**

github.com/Md-IdrisUmaeer/whos-that-pokemon | md-idrisumaeer.github.io/whos-that-pokemon

- Built a browser-based guessing game covering all 151 original Pokémon using live sprite data pulled from the public PokeAPI
- Implemented a silhouette-reveal mechanic with real-time input matching, checking the guess on every keystroke rather than requiring a submit action
- Designed a procedural hint system and a dynamic UI that recolors the background gradient based on the Pokémon's elemental type(s)

ACHIEVEMENTS

- 230+ problems solved on LeetCode, covering arrays, strings, trees, graphs, and dynamic programming
- Participated in Reforge, a web development hackathon organized by the OSPC (Open Source Programming Club), extending a base codebase with new features under time constraints
